Call for Abstracts — Student Work-in-Progress

WCTP 2026 — 15th Workshop on Computation: Theory and Practice November 25–27, 2026 The Learning Resource Center, De La Salle Lipa, Lipa City, Batangas, Philippines

https://www.lambda.comp.isct.ac.jp/wctp/wctp2026/index.html

An invitation to students

For WCTP 2026 we especially invite **undergraduate, master's, and doctoral students** to submit an abstract describing ongoing research. You will present to an audience of students, theoreticians and practitioners from academe and industry across Japan and the Philippines, and receive comments from a Program Committee drawn from distinguished institutions in both countries. For many students this is the most useful feedback they will get before their thesis defense.

Who may submit

- Students currently enrolled in an undergraduate or graduate programme.
- The student must be the first author and must present the work personally at the workshop.
- Co-authorship with supervisors and collaborators is fine and expected.
- The work may be a thesis project, a course project grown into research, or an independent investigation.

What to submit

A single PDF containing:

- **Title** of the work
- **Names and affiliations** of all authors, with the student author identified and their programme and year of study noted
- **An abstract of 70–150 words**
- Contact author's **name, phone number, and email address**

Optionally, you may add up to one extra page of supporting material — a figure, a preliminary result table, a system diagram, or a short sketch of the method and what remains to be done. This helps reviewers understand where the work stands.

Abstracts must be written in English. Presented work must not have been published elsewhere.

Topics

Any topic within the scope of the workshop, including but not limited to:

- **Theory of Computation** — models of computation, logic, design and analysis of algorithms
- **Software and its Engineering** — software organization and properties, software creation and management
- **Security and Privacy** — formal methods and theory of security, security services, software and application security, human and societal aspects
- **Human-Centered Computing** — HCI, interaction design, collaborative and social computing, ubiquitous and mobile computing
- **Computing Methodologies** — symbolic and algebraic manipulation, artificial intelligence, machine learning, concurrent computing methodologies
- **Applied Computing** — enterprise computing, life and medical sciences, education, computing in other domains
- **Health Informatics** — clinical informatics, population health informatics, clinical decision support systems, mobile computing for health, health monitoring systems

Work that connects results from other fields to these topics is also welcome.

Important Dates

Milestone	Date
Abstract submission deadline	Sep 30, 2026
Acceptance notification	Oct 15, 2026
Early registration	Oct 16–30, 2026
Regular registration	Nov 1–25, 2026
Workshop	Nov 25–27, 2026

Organization

Program Co-Chairs

- Jaime Caro — University of the Philippines–Diliman
- Merlin Suarez — De La Salle University
- Masayuki Numao — Kyoto Tachibana University
- Shin-ya Nishizaki — Institute of Science Tokyo
- Shigeki Hagihara — Chitose Institute of Science and Technology

Supported by De La Salle Lipa and Chitose Institute of Science and Technology.
